

LUXSPHERE THE FLOATING MESSAGE SPHERE

General features

LUXSPHERE is the innovative product in LED display industry. Its eye catching visual phenomenon creates attractive message through the unique LED display technology being employed inside a polycarbonate capsule.

The light assembly is rotating at high speed in a precisely tuned up orbit inside the capsule and thus forming 360 degree scrolling message which is appeared to be floating in the mid-air during operation. Unlike the traditional neon sign or optic fibre sign, multiple messages and animated graphics inside the sphere can be easily programmed and reprogrammed as your promotional needs change. Watching the magic sphere will never be boring, it is fun and informative!

LUXSPHERE is a new kind of visual media which will be suitable for point-of-purchase, advertising, information announcement, product promotion, road show... etc. in environments where public attention from visitors / spectators is expected to be drawn at first glance. There are different colour versions in red, yellow, pure green, blue and multi colours (red/green/yellow) for your selection.

Hardware specification
